EDUCATION

Carnegie Mellon University

M.S. in Machine Learning

Expected Dec. 2027

Pittsburgh, PA

Georgia Institute of Technology

B.S. in Computer Science (Intelligence & Theory), GPA: 4.0/4.0

May 2026

Atlanta, GA

EXPERIENCE

Databricks

SWE Intern - Database Infra

May 2026 – Aug. 2026

Mountain View, CA

- Re-architected an internal storage debugging agent onto the Claude Code agent framework and introduced end-to-end observability and tracing across 80+ contexts serving 100+ weekly users, accelerating debugging workflows.
- Built LLM-powered on-call support and incident-tracking agents with Slack integration that automated incident investigation, summarization, and retrospectives, reducing weekly reporting toil by 80%.

Amazon Web Services

SDE Intern - Code Whisperer

May 2025 – Aug. 2025

Seattle, WA

- Led design and implementation of automated GitHub credential rotation infrastructure using AWS Secrets Manager and Lambda across 8 CI/CD pipelines supporting Amazon Q (AI IDE assistant).
- Automated event-driven redeployments triggered by secret updates, reducing operational effort by 66% (6 to 2 developer-hours).
- Packaged system into a reusable TypeScript construct for end-to-end Personal Access Token rotation workflows.

Undergraduate Researcher - Robot Learning Lab

Georgia Tech

May 2024 – Present

Atlanta, GA

- Led large-scale simulation benchmarking of multitask robot policies for ReSteer (RSS 2026), executing 18K+ evaluation rollouts across diverse VLA architectures and identifying failure modes that drove a 20% improvement in task success.
- Designed and conducted robustness evaluations by introducing temporal jitter into environment dynamics, analyzing its impact on VLA policy performance, stability, and generalization.

Undergraduate Researcher - Computational Genomics

Columbia University

Jul. 2021 – Aug. 2023

New York, NY

- Used transformer-based protein embeddings (ESM) to classify 120K+ variants by pathogenicity using downstream supervised models.
- Achieved AUROC of 0.88 using cross-validated classifiers (CNN, MSA Transformer) for pathogenicity prediction.

PUBLICATIONS

ReSteer: Quantifying and Refining the Steerability of Multitask Robot Policies

Chen, Z., **Tian, A.**, Wang, L., Joffe, B., Lin, Y. C., Chen, Y., Karamcheti, S., Xu, D. *Robotics: Science and Systems (RSS)*, 2026 <https://arxiv.org/abs/2603.17300>

PROJECTS

FleetForge (Top 10, YC Hackathon) | JAX, Reinforcement Learning, Simulation

Jun. 2026

- Built city-scale JAX multi-agent RL simulator for fleet autonomy, modeling vehicle routing, demand dynamics, traffic constraints, and operational objectives.
- Developed PPO agents for fleet-level dispatch and repositioning, evaluating policies under non-stationary demand and mobility constraints.

BostonHacks Hackathon (1st Place) | Django, Natural Language Processing, OpenAI API

Nov. 2024

- Built a photo-to-LaTeX conversion system using LLM-based OCR and structured parsing, deployed via Django
- Reduced time required to transcribe handwritten equations into LaTeX by over 50%.

TECHNICAL SKILLS

Languages: Python, Java, TypeScript/JavaScript, SQL, Bash, LaTeX

ML: PyTorch, TensorFlow, Scikit-learn, Transformers, Reinforcement Learning (PPO, SAC), Vision-Language Models

Robotics: MuJoCo, robosuite, robocasa, robomimic

Infrastructure: AWS, Docker, FastAPI, Grafana, Weights & Biases, Git, Claude Agent SDK
